**Investment Objective:** The Defensive Market Strategies Fund seeks to provide long-term capital appreciation with reduced volatility compared to the equity market.

**Investment Suitability:** The Defensive Market Strategies Fund may be suitable for investors who have a medium-to-long-term investment horizon, possess a moderate tolerance for risk and seek to participate in the return potential of equities at a slightly lower risk level than an all equity portfolio.

Securities of foreign issuers may be negatively impacted by political events, economic conditions or inefficient, illiquid or unregulated markets in foreign countries, and they also may be subject to inadequate regulatory or accounting standards, which may increase investment risk. This Fund is subject to interest rate risk, meaning, when interest rates rise, the value of the existing fixed income securities decreases and vice versa. Changes in interest rates have a bigger impact on long-duration holdings than on short-duration holdings. Economic, market, political and other conditions and events can cause the value of equity securities to fluctuate. In addition to the interest and credit rate risks associated with fixed income securities, a convertible security's market value also tends to reflect the market value of the common stock of the issuing company when that stock price approaches or is greater than the convertible security's "conversion price." This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund's prospectus for more detailed risk information.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results.
The benchmark is more volatile than the benchmark. As defined by the fund's benchmark. A fund with a higher beta relative to the benchmark index tracks the movements of a fund can be explained by movements in the benchmark. A high standard deviation implies greater volatility and greater risk.

- **Sharpe Ratio** — A risk-adjusted measure that measures reward per unit of risk. The higher the Sharpe ratio, the better the fund's historical risk-adjusted performance.
- **Information Ratio** — Measured how much the fund outperformed the benchmark per unit of additional risk taken.

- **Beta vs. Benchmark** — Beta is a measure of a fund's sensitivity to market movements as defined by the fund's benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

- **R-squared** — Shows the percentage of a fund's performance that is explained by movements in the benchmark index. An R-squared of 100% indicates that all movements of a fund can be explained by movements in the benchmark.

- **Beta vs. S&P 500 Index** — Beta is a measure of a fund's sensitivity to market movements as defined by the S&P 500 Index. An R-squared of 100% indicates that all movements of a fund can be explained by movements in the S&P 500 Index.

- **Standard Deviation** — Depicts how widely returns varied over a certain period of time. A fund with a higher standard deviation implies greater volatility and greater risk.

Endorse, review, or recommend the Defensive Market Strategies Fund. Bloomberg does not guarantee the timeliness, accuracy, or completeness of any data or information relating to the Defensive Market Strategies Fund. All indexes used with permission. It is not possible to invest directly in an index. The Morningstar Rating® for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36–59 months of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. Past performance is not guarantee of future results. Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund. Due to rounding, portfolio holdings data may not sum to 100%. There can be no guarantee that any strategy will be successful. All investing involves risk, including potential loss of principal.
**Equity Investment Approach**

**Value**

**Style**

**Growth**

**Large Capitalization**

**Investment Objective:** The Equity Index Fund seeks to provide investment results approximating the aggregate price and dividend performance of the securities included in the S&P 500® Index.

**Investment Suitability:** The Equity Index Fund may be suitable for investors who seek higher, long-term rates of return, can accept significant short-term fluctuations in account value and want to diversify their portfolio by adding a potentially higher return, higher risk option of stocks.

Economic, market, political and other conditions and events can cause the value of equity securities to fluctuate. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund’s prospectus for more detailed risk information.

**CALENDAR YEAR PERFORMANCE**

The performance data quoted represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance data quoted. Performance data current to the most recent month-end and complete calendar year performance may be obtained at GuideStoneFunds.com/Funds. Benchmark performance numbers are provided by Morningstar, Inc. and have not been verified by GuideStone Funds. The investment return of an investment will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Year 2001 annual performance began 08/27/2001. Returns exceeding 20% reflect unusual market conditions and may not be sustained at this level over the long term.

Price to Earnings Ratio—A ratio used to compare the price of a fund’s stocks with their per-share earnings.
Price to Book Ratio—A ratio used to compare the book value of a fund’s stocks with their market value.

Weighted average market cap—Market capitalization refers to the market value of a public company’s outstanding shares of stock and is frequently used to show the size of the company. Weighted average market capitalization reflects the average size of the companies whose equity securities are held in the portfolio.

Standard deviation—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk.
R-squared—Shows the percentage of a fund’s performance that is explained by movements in the benchmark index. An R-squared of 100% indicates that all movements of a fund can be explained by movements in the benchmark.

Beta vs. Benchmark—Beta is a measure of a fund’s sensitivity to market movements as defined by the fund’s benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

Beta vs. S&P 500® Index—Beta is a measure of a fund’s sensitivity to market movements as defined by the S&P 500 Index. A fund with a higher beta relative to the S&P 500 Index is more volatile than the S&P 500 Index.

Sharpe Ratio—A risk-adjusted measure that measures reward per unit of risk. The higher the Sharpe ratio, the better the fund’s historical risk-adjusted performance.
Information Ratio—Measures how much the fund outperformed the benchmark per unit of additional risk.

1The Russell 1000 Value Index is a large-cap index consisting of those Russell 1000 Index securities with a less-than-average growth orientation. Companies in this index tend to exhibit lower price-to-book and price-to-earnings ratios, higher dividend yields and lower forecasted growth values than the growth universe. Frank Russell Company (“Russell”) is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. *Russell® is a trademark of Frank Russell Company. Index used with permission. It is not possible to invest directly in an index.
2The Morningstar Rating™ for funds, or “star rating,” is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36–59 months of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. Past performance is not guarantee of future results.
3Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.
4Due to rounding, portfolio holdings data may not sum to 100%.
5Sub-adviser composite is subject to change at any time. The percentages shown reflect the target allocations of the Fund. Actual sub-adviser weights may differ at any time. Due to rounding, target allocations may not sum to 100%. There can be no guarantee that any strategy will be successful. All investing involves risk, including potential loss of principal.

**CALAEB YEAR PERFORMANCE**

The performance data quoted represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance data quoted. Performance data current to the most recent month-end and complete calendar year performance may be obtained at GuideStoneFunds.com/Funds. Benchmark performance numbers are provided by Morningstar, Inc. and have not been verified by GuideStone Funds. The investment return of an investment will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Year 2001 annual performance began 08/27/2001. Returns exceeding 20% reflect unusual market conditions and may not be sustained at this level over the long term.

**Past performance is not guarantee of future results.**
Investment Objective: The Small Cap Equity Fund seeks to provide long-term capital appreciation. Any income received is incidental to this objective.

Investment Suitability: The Small Cap Equity Fund may be suitable for investors who seek higher, long-term rates of return, can accept significant short-term fluctuations in account value, want to invest in stocks of small- to medium-sized U.S. companies and would like to diversify their portfolio by adding a potentially higher return, higher risk option of equities.

Small company stocks are subject to greater risk than large company stocks due to more volatility and less liquidity. Economic, market, political and other conditions and events can cause the value of equity securities to fluctuate. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund’s prospectus for more detailed risk information.

Price to Earnings Ratio—A ratio used to compare the price of a fund's stocks with their per-share earnings.

Price to Book Ratio—A ratio used to compare the book value of a fund's stocks with their market value.

Weighted average market cap—Market capitalization refers to the market value of a public company's outstanding shares of stock and is frequently used to show the size of the company. The large-cap segment of the market refers to the largest companies whose equity securities are held in the portfolio.

Standard deviation—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk.

R-squared—Shows the percentage of a fund's performance that is explained by movements in the benchmark index. An R-squared of 100% indicates that all movements of a fund can be explained by movements in the benchmark.

Beta vs. Benchmark—Beta is a measure of a fund's sensitivity to market movements as defined by the fund's benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

Financial Services: 20.33%

Utilities: 1.53%

Beta vs. Benchmark—Beta is a measure of a fund's sensitivity to market movements as defined by the fund's benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

Beta vs. S&P 500® Index—Beta is a measure of a fund's sensitivity to market movements as defined by the S&P 500 Index. A fund with a higher beta relative to the S&P 500 Index is more volatile than the S&P 500 Index.

Sharpe Ratio—A risk-adjusted measure that measures reward per unit of risk. The higher the Sharpe ratio, the better the fund's historical risk-adjusted performance.

Information Ratio—Measures how much the fund outperformed the benchmark per unit of additional risk taken.

1 The Russell 2000 Index measures the performance of the small-cap segment of the U.S. equity universe and is a subset of the Russell 3000 Index, representing approximately 10% of the total market capitalization of that index. It includes approximately 2,000 of the smallest securities based on a combination of their market cap and current index membership. The index is completely reconstituted annually to ensure that larger stocks do not distort the performance and characteristics of the actual small-cap opportunity set. Frank Russell Company ("Russell") is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. "Russell®" is a trademark of Frank Russell Company. Neither Russell nor its licensors accept any liability for any errors or omissions in the Russell Indexes and/or Russell ratings and/or underlying data and no party may rely on any Russell Indexes and/or Russell ratings and/or underlying data contained in this communication. Index used with permission. It is not possible to invest directly in an index.

2 The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 60 or more months of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. Past performance is not guarantee of future results.

3 Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.

4 Due to rounding, portfolio holdings data may not sum to 100%.
**Equity Investment Approach**

**VALUE** | **STYLE** | **GROWTH**
---|---|---
LARGE |  | SMALL

**Investment Objective:** The International Equity Index Fund seeks to provide investment results approximating the aggregate price and dividend performance of the securities included in the MSCI Europe, Australasia and Far East Index ("MSCI EAFE Index").

**Investment Suitability:** The International Equity Index Fund may be suitable for investors who seek higher, long-term rates of return, can accept significant short-term fluctuations in account value and want to diversify their portfolio with international equities.

Securities of foreign issuers may be negatively impacted by political events, economic conditions or inefficient, illiquid or unregulated markets in foreign countries, and they also may be subject to inadequate regulatory or accounting standards, which may increase investment risk. Investing in emerging markets may involve greater risks than investing in more developed foreign markets because, among other things, emerging markets often have more political and economic instability. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund's prospectus for more detailed risk information.

*** Based on actual securities held in the Fund

---

Price to Earnings Ratio—A ratio used to compare the price of a fund's stocks with their per-share earnings.

Price to Book Ratio—A ratio used to compare the book value of a fund's stocks with their market value.

Weighted average market cap—Market capitalization refers to the market value of a company's outstanding shares of stock and is frequently used to show the size of the company. Weighted average market capitalization reflects the average size of the companies whose equity securities are held in the portfolio.

Standard deviation—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk.

R-squared—Shows the percentage of a fund's performance that is explained by movements in the benchmark index. An R-squared of 100 indicates that all movements of a fund can be explained by movements in the benchmark.

Beta vs. Benchmark—Beta is a measure of a fund's sensitivity to market movements as defined by the fund's benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

Beta vs. S&P 500 Index—Beta is a measure of a fund's sensitivity to market movements as defined by the S&P 500 Index. A fund with a higher beta relative to the S&P 500 Index is more volatile than the S&P 500 Index.

Sharpe Ratio—A risk-adjusted measure that measures reward per unit of risk. The higher the Sharpe ratio, the better the fund's historical risk-adjusted performance.

Information Ratio—Measures how much the fund outperformed the benchmark per unit of additional risk taken.

The MSCI EAFE Index is a free float-adjusted market capitalization index that is designed to measure equity market performance of developed markets, excluding the U.S. and Canada. The funds described herein are indexed to an MSCI Index and are not sponsored, endorsed or promoted by MSCI, and MSCI bears no liability with respect to any such funds or securities or any index on which such funds or securities are based. The Prospectus contains a more detailed description of the limited relationship MSCI has with GuideStone Funds® and any related funds. Index used with permission. It is not possible to invest directly in an index.

The Morningstar Rating™ for funds, or “star rating,” is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100%: three-year rating for 36–59 months of total returns, 80%: five-year rating/40% three-year rating for 60–119 months of total returns and 50%: 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. Past performance is not guarantee of future results.

Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.

Due to rounding, portfolio holdings data may not sum to 100%. There can be no guarantee that any strategy will be successful. All investing involves risk, including potential loss of principal.
Investment Objective: The Emerging Markets Equity Fund seeks to provide long-term capital appreciation. Any income received is incidental to this objective.

Investment Suitability: The Emerging Markets Equity Fund may be suitable for investors who seek higher, long-term rates of return, can accept significant short-term fluctuations in account value and want to diversify their portfolio with emerging market equities.

Securities of foreign issuers may be negatively impacted by political events, economic conditions or inefficient, illiquid or unregulated markets in foreign countries, and they also may be subject to inadequate regulatory or accounting standards, which may increase investment risk. Investing in emerging markets may involve greater risks than investing in more developed foreign markets because, among other things, emerging markets often have more political and economic instability. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund’s prospectus for more detailed risk information.

Due to rounding, target allocations may not sum to 100%. There can be no guarantee that any strategy will be successful. All investing involves risk, including potential loss of principal.
**Investment Objective:** The Money Market Fund seeks to maximize current income to the extent consistent with the preservation of capital and liquidity, and the maintenance of a stable per share price of $1.00.

**Investment Suitability:** The Money Market Fund may be suitable for investors who have a short-term investment horizon, seek to maintain a stable dollar value for their investment and can accept a long-term rate of return that may be lower than other fixed income and equity investments.

You could lose money by investing in the Fund. Although the Fund seeks to preserve the value of your investment at $1.00 per share, it cannot guarantee it will do so. An investment in the Fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. The Fund’s sponsor has no legal obligation to provide financial support to the Fund, and you should not expect that the sponsor will provide financial support to the Fund at any time. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund’s prospectus for more detailed risk information.

Investment Objective: The Low-Duration Bond Fund seeks current income consistent with preservation of capital.

Investment Suitability: The Low-Duration Bond Fund may be suitable for investors who have a short-term investment horizon, seek an investment return that is relatively stable and want to diversify their portfolio with a fixed income investment option.

This Fund is subject to interest rate risk, meaning, when interest rates rise, the value of the existing fixed income securities decreases and vice versa. Changes in interest rates have a bigger impact on long-duration holdings than on short-duration holdings. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund's prospectus for more detailed risk information.

GuideStone Capital Management, LLC ("GuideStone"), the adviser to the Fund, may invest directly in securities on behalf of the Fund. The Adviser also maintains a sub-advisory agreement with Parametric Portfolio Associates LLC ("Parametric") under which Parametric will provide completion portfolios within the Fund, as instructed by the Adviser. The Adviser’s direct investments and Parametric’s “completion portfolios” are used to assist in preserving the desired risk exposures for the Fund in furtherance of its investment objective. Direct investments and completion portfolios that are short-term in nature are not included in the target allocations of the Fund to sub-advisers listed above.
Investment Objective: The Medium-Duration Bond Fund seeks maximum total return consistent with preservation of capital.

Investment Suitability: The Medium-Duration Bond Fund may be suitable for investors who have a short-to medium-term investment horizon, seek higher returns than those offered by a shorter maturity bond fund, can accept some short-term fluctuations in account value and want to diversify their portfolio with a fixed income investment option.

This Fund is subject to interest rate risk, meaning, when interest rates rise, the value of the existing fixed income securities decreases and vice versa. Changes in interest rates have a bigger impact on long-duration holdings than on short-duration holdings. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund’s prospectus for more detailed risk information.

Cash is maintained by the Fund for liquidity purposes and may be overlaid with equity and/or U.S. Treasury futures to provide capital market exposure.

**Weighted average maturity**—The average amount of time remaining before the debt securities in a portfolio mature.

**Duration**—A measure of the sensitivity, or volatility, of fixed income investments to changes in interest rates.

**Standard deviation**—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk.

**R-squared**—Shows the percentage of a fund’s performance that is explained by movements in the benchmark index. An R-squared of 100% indicates that all movements of a fund can be explained by movements in the benchmark. Beta vs. Benchmark—Beta is a measure of a fund's sensitivity to market movements as defined by the fund's benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

**Sharpe Ratio**—A risk-adjusted measure that measures reward per unit of risk. The higher the Sharpe ratio, the better the fund’s historical risk-adjusted performance.

**Information Ratio**—Measures how much the fund outperformed the benchmark per unit of additional risk taken.

1. The Bloomberg U.S. Aggregate Bond Index is a broad-based flagship benchmark that measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, MBS (agency fixed-rate and hybrid ARM pass-throughs), ABS and CMBS (agency and non-agency). Bloomberg is not affiliated with GuideStone Financial Resources, which owns Bloomberg.*

2. Bloomberg does not approve, endorse, review, or recommend the Medium-Duration Bond Fund. Bloomberg does not guarantee the timeliness, accurateness, or completeness of any data or information relating to the Medium-Duration Bond Fund. Index used with permission. It is not possible to invest directly in an index.

3. The Morningstar Rating for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history.

4. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating/40% four-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns and 50% 10-year rating/35% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary.

5. Some asterisk and may vary. Past performance is not guarantee of future results.

6. Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.

7. Due to rounding, portfolio holdings data may not sum to 100%.

8. Sub-adviser composite is subject to change at any time. The percentages shown reflect the target allocations of the Fund. Actual sub-adviser weights may differ at any time.

9. Due to rounding, target allocations may not sum to 100%. There can be no guarantee that any strategy will be successful. All investing involves risk, including potential loss of principal.

The credit quality letter ratings are provided to indicate the creditworthiness of the underlying securities within the Fund and not of the Fund itself. These credit ratings range from AAA/Govt/Agency (highest) to Lower Than B (lowest) and are assigned by the rating agencies Moody’s and Fitch. Where credit ratings differ between these rating agencies, the lower (more conservative) rating shall be used. If only one rating is provided, that rating shall be used. If a security is unrated by both of the Nationally Recognized Statistical Rating Organizations (NRSROs) listed above, then it will be classified as Not Rated in the table.
Investment Objective: The Global Bond Fund seeks to maximize total return through capital gains and current income while preserving principal value.

Investment Suitability: The Global Bond Fund may be suitable for investors who have a medium- to long-term investment horizon, seek higher returns than those offered by a shorter maturity bond fund, can accept short-term fluctuations in account value and want to diversify their portfolio with a globally diversified fixed income investment option.

This Fund may invest, to a large extent, in high-yield securities ("junk bonds"). These securities involve greater risks of default, are more volatile than bonds rated investment grade and are inherently speculative. Obligations of foreign issuers may be negatively impacted by political events, economic conditions or inefficient, illiquid or unregulated markets in foreign countries, and they also may be subject to inadequate regulatory or accounting standards, which may increase investment risk. Investing in emerging markets may involve greater risks than investing in more developed foreign markets because, among other things, emerging markets often have more political and economic instability. This Fund is subject to interest rate risk, meaning, when interest rates rise, the value of the existing fixed income securities decreases and vice versa. Changes in interest rates have a bigger impact on long-duration holdings than on short-duration holdings. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund's prospectus for more detailed risk information.

**Weighted average maturity—The average amount of time remaining before the debt securities in a portfolio mature. Duration—A measure of the sensitivity, or volatility, of fixed income investments to changes in interest rates.**

Standard deviation—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk.

R-squared—Shows the percentage of a fund's performance that is explained by movements in the benchmark index. An R-squared of 100% indicates that all movements of a fund can be explained by movements in the benchmark.

Beta vs. Benchmark—Beta is a measure of a fund's sensitivity to market movements as defined by the fund's benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

Sharpe Ratio—A risk-adjusted measure that measures reward per unit of risk. The higher the Sharpe ratio, the better the fund's historical risk-adjusted performance.

Information Ratio—Measures how much the fund outperformed the benchmark per unit of additional risk taken.

1The Bloomberg Global Aggregate Index - Unhedged is a flagship measure global investment grade debt. This multi-currency benchmark includes treasuries, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers. The Bloomberg U.S. Corporate High Yield Index - 2% Issuer Capped is an issuer-constrained version of the flagship Bloomberg U.S. Corporate High Yield Index, which measures the U.S. dollar-denominated, high yield, fixed rate corporate bond market. The index follows the same rules as the uncapped version but limits the exposure of each issuer to 2% of the total market value and redistributes any excess market value index-wide on a pro rata basis. "Bloomberg®", Bloomberg Global Aggregate Index - Unhedged and Bloomberg U.S. Corporate High Yield Index – 2% Issuer Capped are service marks of Bloomberg Finance L.P. and its affiliates, including Bloomberg Index Services Limited ("BISL"), the administrator of the index (collectively, "Bloomberg") and have been licensed for use for certain purposes by GuideStone Financial Resources of the Southern Baptist Convention ("GuideStone Financial Resources") and its affiliates. Bloomberg is not affiliated with GuideStone Financial Resources and its affiliates and Bloomberg does not approve, endorse, review, or recommend the Global Bond Fund. Bloomberg does not guarantee the timeliness, accuracy, or completeness of any data or information relating to the Global Bond Fund.

2The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least one year’s history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for a fund’s monthly product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36–59 months of total returns, 65% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. Past performance is not guarantee of future results.

3Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.

4Due to rounding, portfolio holdings data may not sum to 100%.

5Sub-adviser composite is subject to change at any time. The percentages shown reflect the target allocations of the Fund. Actual sub-adviser weights may differ at any time. Due to rounding, target allocations may not sum to 100%. There can be no guarantee that any strategy will be successful. All investing involves risk, including potential loss of principal.

6The credit quality letter ratings are provided to indicate the creditworthiness of the underlying securities within the Fund and not of the Fund itself. These credit ratings range from AAA/Govt/Agency (highest) to Lower Than B (lowest) and are assigned by the rating agencies Moody’s and Fitch. Where credit ratings differ between these rating agencies, the lower (more conservative) rating shall be used. If only one rating is provided, that rating shall be used. If a security is unrated by both of the Nationally Recognized Statistical Rating Organizations (NRSROs) listed above, then it will be classified as Not Rated in the table.

J.P. Morgan's prior written approval. Copyright 2023, J.P. Morgan Chase & Co. All rights reserved. All indexes used with permission. It is not possible to invest directly in an index.
Investment Objective: The Strategic Alternatives Fund seeks absolute returns with both lower volatility than and low correlation with traditional equity and fixed income markets.

Investment Suitability: The Strategic Alternatives Fund may be suitable for investors who have a short-term to medium-term investment horizon, can accept short-term fluctuations in account value and would like to diversify their portfolio with an alternatives investment option.

The alternative investment strategies that the Fund pursues are complex and may involve greater risk than traditional investments (stocks, bonds and cash). The performance of alternative investments is not expected to correlate closely with more traditional investments; however, it is possible that alternative investments will decline in value along with equity or fixed income markets, or both, or that they may not otherwise perform in accordance with expectations. Alternative investments can be highly volatile, are often less liquid, particularly in periods of stress, are generally more complex and less transparent and may have more complicated tax profiles than traditional investments. In addition, the performance of alternative investments may be more dependent on a sub-advisor's experience and skill than traditional investments. The use of alternative investments may not achieve the desired effect. Derivatives involve different risks from, and in some respects greater risks than, those associated with investing directly in securities, currencies or other instruments. Derivatives may be illiquid or less liquid, volatile, difficult to price and leveraged so that small changes in value of the underlying instruments may produce disproportionate losses to the Fund. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund's prospectus for more detailed risk information.

### Sub-Adviser

- **AQR Capital Management, LLC**
  - Utilizes a systematic application of fundamental investing by going long high-quality, low-beta and short low-quality, high-beta U.S. large cap companies
  - Strategy is run beta neutral to equities
- **Goldman Sachs Asset Management, L.P.**
  - Utilizes a fundamentally disciplined and stringently risk-managed approach to macroeconomic investing across sovereign bond and currency markets in both developed and emerging markets
  - Makes extensive use of derivatives
- **Parametric Portfolio Associates**
  - Utilizes a short-term fixed income strategy that seeks to produce an attractive yield while attempting to limit downside risk
  - Strategy is invested in defensive fixed income securities
- **P/E Global LLC**
  - Utilizes a systematic process based on macroeconomic factors to generate returns by investing globally in currencies and, to a lesser extent, sovereigns on a long/short basis
  - Invests primarily in currency and interest rate futures contracts
- **SSI Investment Management**
  - Seeks to capitalize on pricing inefficiencies between the convertible bond and the underlying stock
  - Combines quantitative and fundamental disciplines in its investment process to identify attractive value in convertible debt opportunities

### Exchange-Traded Funds

- Funds, closed-end funds and separate accounts with at least a three-year history.
- Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes.
- It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variances and rewarding consistent performance.
- The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star.
- The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics.
- The weights are: 100% three-year rating for 36–59 months of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. **Past performance is not guarantee of future results.**

**Adjusted Return** measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variances and rewarding consistent performance. **MARKET CAPITALIZATION**

- LARGE
- SMALL

**INVESTMENT OBJECTIVE:** The Global Real Estate Securities Fund seeks to provide long-term capital appreciation and current income.

**INVESTMENT SUITABILITY:** The Global Real Estate Securities Fund may be suitable for investors who seek the potential for current income and long-term capital appreciation. Investors should be willing to accept significant short-term fluctuations in account value and want to diversify their portfolio through exposure to publicly traded, global real estate securities.

This Fund invests substantial assets in REITs that involve equity market risks as well as risks linked directly to the real estate market. Risks include declines in the value of real estate, general and economic conditions, changes in the value of the underlying property and defaults by borrowers. The value of assets in the real estate industry may go through cycles of relative underperformance and outperformance in comparison to equity securities markets in general. Securities of foreign issuers may be negatively impacted by political events, economic conditions or inefficient, illiquid or unregulated markets in foreign countries, and they also may be subject to inadequate regulatory or accounting standards, which may increase investment risk. Investing in emerging markets may involve greater risks than investing in more developed foreign markets because, among other things, emerging markets often have more political and economic instability. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund's prospectus for more detailed risk information.

**CALENDAR YEAR PERFORMANCE¹**

The performance data quoted represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance data quoted. Performance data current to the most recent month-end and complete calendar year performance may be obtained at GuideStoneFunds.com/Funds. Benchmark performance numbers are provided by Morningstar, Inc. and have not been verified by GuideStone Funds. The investment return of an investment will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Year 2015 annual performance began 05/01/2015. Returns exceeding 20% reflect unusual market conditions and may not be sustained at this level over the long term.

Price to Funds from Operations ("FFO")—A ratio used by REITs to show relative value. FFO is calculated by adding back real estate depreciation and amortization expenses to earnings.

Weighted average market capital—Market capitalization refers to the market value of a public company's outstanding shares of stock and is frequently used to show the size of the company. Weighted average market capitalization reflects the average size of the companies whose equity securities are held in the portfolio.

Standard deviation—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk.

Beta—A measure of a fund's sensitivity to market movements as defined by the fund's benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

Sharpe ratio—A risk-adjusted measure that measures reward per unit of risk. The higher the Sharpe ratio, the better the fund's historical risk-adjusted performance.

Information ratio—Measures how much the fund outperformed the benchmark per unit of additional risk taken.

The FTSE EPRA/NAREIT Developed Index - Net is designed to track the performance of listed real estate companies and REITs worldwide. "FTSE" is a trademark of the London Stock Exchange Group Companies. "NAREIT®" is a trademark of the National Association of Real Estate Investment Trusts ("NAREIT") and "EPRA®" is a trademark of the European Public Real Estate Association ("EPRA") and are all used by FTSE International Limited ("FTSE") under license. The FTSE EPRA/NAREIT Developed Index is calculated by FTSE. Neither FTSE, Euronext N.V., NAREIT nor EPRA sponsor, endorse or promote this product and are not in any way connected to it and do not accept any liability. Index used with permission. It is not possible to invest directly in an index.

The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating/40% five-year rating/20% three-year rating/20% three years of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. Past performance is not a guarantee of future results.

Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the fund. Due to rounding, portfolio holdings data may not sum to 100%.

Sub-adviser composite is subject to change at any time. The percentages shown reflect the target allocations of the Fund. Actual sub-adviser weights may differ at any time. Due to rounding, target allocations may not sum to 100%. There can be no guarantee that any strategy will be successful. All investing involves risk, including potential loss of principal.

PORTFOLIO CHARACTERISTICS

S&P 500 Index is more volatile than the S&P 500 Index.

Beta is a measure of a fund's sensitivity to market movements as defined by the fund's benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

R-squared—Shows the percentage of a fund's performance that is explained by movements in the benchmark index. An R-squared of 100% indicates that all movements of a fund can be explained by movements in the benchmark.

Beta vs. Benchmark—Beta is a measure of a fund's sensitivity to market movements as defined by the fund's benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

Beta vs. S&P 500® Index—Beta is a measure of a fund's sensitivity to market movements as defined by the S&P 500® Index. A fund with a higher beta relative to the S&P 500® Index is more volatile than the S&P 500® Index.

Sharpe Ratio—A risk-adjusted measure that measures reward per unit of risk. The higher the Sharpe ratio, the better the fund's historical risk-adjusted performance.

Information Ratio—Measures how much the fund outperformed the benchmark per unit of additional risk taken.

Cash is maintained by the Fund for liquidity purposes and may be overlaid with equity and/or U.S. Treasury futures to provide capital market exposure.
Investment Objective: The MyDestination 2015 Fund seeks the highest total return over time consistent with its asset mix. Total return includes capital appreciation and income.

Investment Suitability: The MyDestination 2015 Fund is designed for an investor who anticipates retiring at or near the target date and who plans to withdraw the value of the account in the Fund gradually after retirement. Over time, the allocation to asset classes will change according to a predetermined glide path, which adjusts the percentage of fixed income securities and equity securities to become more conservative each year until approximately 15 years after the target date. The Fund attempts to achieve its objective by investing in a diversified portfolio of primarily the Select Funds that represent various asset classes. The Fund is managed to the specific year included in its name and assumes a retirement age of 65. The target date refers to the approximate year an investor in the Fund would plan to retire and likely stop making any new investments in the Fund.

Securities of foreign issuers may be negatively impacted by political events, economic conditions or inefficient, illiquid or unregulated markets in foreign countries, and they also may be subject to inadequate regulatory or accounting standards, which may increase investment risk. The Fund's value will fluctuate due to changes in interest rates. There is a risk that the issuer of a fixed income investment may fail to pay interest or even principal due in a timely manner or at all. The Fund's value will fluctuate due to business developments concerning a particular issuer, industry or country, as well as general market and economic conditions. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund's prospectus for more detailed risk information.

Annual Operating Expenses

<table>

<tbody>
<tr>
<td>0.54%</td>
<td>0.45%</td>
</tr>
</tbody>
</table>

†By investing in this Fund, you will incur the expenses of the Fund, in addition to those of the underlying Select Funds. You may directly invest in the Select Funds. The Fund's value will go up and down in response to changes in the share prices of the investments that it owns. The amount invested in the Fund is not guaranteed to increase, is not guaranteed against loss, nor is the amount of the original investment guaranteed at the target date.

*The Adviser has agreed to waive fees and/or reimburse expenses to the extent needed to limit total annual operating expenses (excluding extraordinary expenses) to 0.45% for the Institutional Class. This contractual waiver and reimbursement applies to Fund operating expenses only and will remain in place until April 30, 2024.

The performance data quoted represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance data quoted. Performance data current to the most recent month-end and complete calendar year performance may be obtained at GuideStoneFunds.com/Funds. Benchmark performance numbers are provided by Morningstar, Inc. and have not been verified by GuideStone Funds. The investment return of an investment will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Year 2017 annual performance began 05/01/2017. Performance would have been lower without fee waivers and reimbursements to the Fund in effect.

You should carefully consider the investment objectives, risks, charges and expenses of the GuideStone Funds® before investing. GuideStone Capital Management, LLC, the adviser to the Fund, maintains a sub-advisory agreement with Parametric Portfolio Associates LLC (“Parametric”) under which Parametric will provide “completion portfolios” within the Fund from time to time. These “completion portfolios” are used to assist in preserving the desired risk exposures for the Fund in furtherance of its investment objective. Completion portfolios that are short-term in nature are not included in the portfolio holdings of the Fund listed above.

Standard deviation—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk.

Beta vs. S&P 500® Index—Beta is a measure of a fund’s sensitivity to market movements as defined by the S&P 500 Index. A fund with a higher beta relative to the S&P 500 Index is more volatile than the S&P 500 Index.

The Morningstar Rating™ for funds, or “star rating,” is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36–59 months of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. Past performance is not guarantee of future results.

Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.

Due to rounding, portfolio holdings data may not sum to 100%.

The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36–59 months of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary.

**Past performance is not guarantee of future results.**

### Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.

### Due to rounding, portfolio holdings data may not sum to 100%.
Investment Objective: The MyDestination 2035 Fund seeks the highest total return over time consistent with its asset mix. Total return includes capital appreciation and income.

Investment Suitability: The MyDestination 2035 Fund is designed for an investor who anticipates retiring at or near the target date and who plans to withdraw the value of the account in the Fund gradually after retirement. Over time, the allocation to asset classes will change according to a predetermined glide path, which adjusts the percentage of fixed income securities and equity securities to become more conservative each year until approximately 15 years after the target date. The Fund attempts to achieve its objective by investing in a diversified portfolio of primarily the Select Funds that represent various asset classes. The Fund is managed to the specific year included in its name and assumes a retirement age of 65. The target date refers to the approximate year an investor in the Fund would plan to retire and likely stop making any new investments in the Fund.

Securities of foreign issuers may be negatively impacted by political events, economic conditions or inefficient, illiquid or unregulated markets in foreign countries, and they also may be subject to inadequate regulatory or accounting standards, which may increase investment risk. The Fund's value will fluctuate due to changes in interest rates. There is a risk that the issuer of a fixed income investment may fail to pay interest or even principal due in a timely manner or at all. The Fund's value will fluctuate due to business developments concerning a particular issuer, industry or country, as well as general market and economic conditions. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund's prospectus for more detailed risk information.

GuideStone Capital Management, LLC, the adviser to the Fund, maintains a sub-advisory agreement with Parametric Portfolio Associates LLC ("Parametric") under which Parametric will provide "completion portfolios" within the Fund from time to time. These "completion portfolios" are used to assist in preserving the desired risk exposures for the Fund in furtherance of its investment objective. Completion portfolios that are short-term in nature are not included in the portfolio holdings of the Fund listed above.

Standard deviation—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk.

Beta vs. S&P 500 Index—Beta is a measure of a fund's sensitivity to market movements as defined by the S&P 500 Index. A fund with a higher beta relative to the S&P 500 Index is more volatile than the S&P 500 Index.

The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36–59 months of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. Past performance is not guarantee of future results.

Standard deviation—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk. Beta vs. S&P 500® Index—Beta is a measure of a fund’s sensitivity to market movements as defined by the S&P 500 Index. A fund with a higher beta relative to the S&P 500 Index is more volatile than the S&P 500 Index.

1 The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36–59 months of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. Past performance is not guarantee of future results.

2 Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.

3 Due to rounding, portfolio holdings data may not sum to 100%.

Cash is maintained by the Fund for liquidity purposes and may be overlaid with equity and/or U.S. Treasury futures to provide capital market exposure.
Investment Objective: The Conservative Allocation Fund seeks current income and modest capital appreciation.

Investment Suitability: The Conservative Allocation Fund may be suitable for investors who have a short- to medium-term investment horizon, possess a relatively low tolerance for risk and want some exposure to the growth potential of the equity market tempered by a larger allocation to short-term fixed income securities. The Fund attempts to achieve its objective, through investments primarily in the Select Funds, by combining a greater percentage of fixed income securities with a smaller percentage of equity securities.

This Fund is subject to interest rate risk, meaning, when interest rates rise, the value of the existing fixed income securities decreases and vice versa. Changes in interest rates have a bigger impact on long-duration holdings than on short-duration holdings. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund's prospectus for more detailed risk information.

GuideStone Capital Management, LLC, the adviser to the Fund, maintains a sub-advisory agreement with Parametric Portfolio Associates LLC ("Parametric") under which Parametric will provide "completion portfolios" within the Fund from time to time. These "completion portfolios" are used to assist in preserving the desired risk exposures for the Fund in furtherance of its investment objective. Completion portfolios that are short-term in nature are not included in the portfolio holdings of the Fund listed above.

Standard deviation—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk.

R-squared—Shows the percentage of a fund’s performance that is explained by movements in the benchmark index. An R-squared of 100% indicates that all movements of a fund can be explained by movements in the benchmark.

Beta vs. Benchmark—Beta is a measure of a fund’s sensitivity to market movements as defined by the fund’s benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

Beta vs. S&P 500® Index—Beta is a measure of a fund’s sensitivity to market movements as defined by the S&P 500 Index. A fund with a higher beta relative to the S&P 500 Index is more volatile than the S&P 500 Index.

**Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.**

*Note: Some values may have been calculated over previous three years.*

**Past performance is not guarantee of future results.**

*Due to rounding, portfolio holdings data may not sum to 100%.*

Standard deviation—Depicts how widely returns varied over a certain period of time. A high standard deviation implies greater volatility and greater risk.

R-squared—Shows the percentage of a fund’s performance that is explained by movements in the benchmark index. An R-squared of 100% indicates that all movements of a fund can be explained by movements in the benchmark.

Beta vs. Benchmark—Beta is a measure of a fund’s sensitivity to market movements as defined by the fund’s benchmark. A fund with a higher beta relative to the benchmark is more volatile than the benchmark.

Beta vs. S&P 500 Index—Beta is a measure of a fund’s sensitivity to market movements as defined by the S&P 500 Index. A fund with a higher beta relative to the S&P 500 Index is more volatile than the S&P 500 Index.

The Composite Benchmark of the Fund was modified effective November 30, 2020, thus the weighting of the underlying indices was different from what is shown herein prior to that date. Composite Benchmark performance shown represents the Fund’s current Composite Benchmark weighting linked to its previous Composite Benchmark performance. MSCI: The funds described herein are indexed to an MSCI index and are not sponsored, endorsed or promoted by MSCI, and MSCI bears no liability with respect to any such funds or securities or any index on which such funds or securities are based. The Prospectus contains a more detailed description of the limited relationship MSCI has with GuideStone Funds® and any related funds.

MSCI: Frank Russell Company (“Russell”) is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. “Russell®” is a trademark of Frank Russell Company. Neither Russell nor its licensors accept any liability for any errors or omissions in the Russell Indexes and/or Russell ratings and/or underlying data and no party may rely on any Russell Indexes and/or Russell ratings and/or underlying data contained in this communication. No further distribution of Russell Data is permitted without Russell's express written consent. Russell does not promote, sponsor or endorse the content of this communication. All indexes used with permission, it is not possible to invest directly in an index. FTSE: “FTSE” is a trademark of the London Stock Exchange Group Companies, “NAREIT®” a trademark of the National Association of Real Estate Investment Trusts (“NAREIT”) and “EPRA®” is a trademark of the European Public Real Estate Association (“EPRA®”) and are all used by FTSE International Limited (“FTSE”) under license. The FTSE EPRA/NAREIT Developed Index is calculated by FTSE. Neither FTSE, Euronext N.V., NAREIT nor EPRA sponsor, endorse or promote this product and are not in any way connected to it and do not accept any liability. Bloomberg: “Bloomberg®”, Bloomberg U.S. Aggregate Bond Index, and Bloomberg 1-3 Month US Treasury Bill are service marks of Bloomberg Finance L.P. and its affiliates, including Bloomberg Index Services Limited (“BISL”), the administrator of the index (collectively, “Bloomberg”) and have been licensed for use for certain purposes by GuideStone Financial Resources of the Southern Baptist Convention (“GuideStone Financial Resources”) and its affiliates. Bloomberg is not affiliated with GuideStone Financial Resources and its affiliates and Bloomberg does not approve, endorse, review, or recommend the Balanced Allocation Fund. Bloomberg does not guarantee the timeliness, accurateness, or completeness of any data or information relating to the Balanced Allocation Fund.

The Morningstar Rating™ for funds, or “star rating,” is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36–59 months of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total return. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary.

Past performance is not guarantee of future results.

Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.
Investment Objective: The Growth Allocation Fund seeks capital appreciation with modest current income.

Investment Suitability: The Growth Allocation Fund may be suitable for investors who have a long-term investment horizon, possess a relatively high tolerance for risk and seek to participate in the return potential of stocks at a slightly lower risk level than an all stock portfolio. The Fund attempts to achieve its objective, through investments primarily in the Select Funds, by combining a greater percentage of equity securities with a smaller percentage of fixed income securities.

Securities of foreign issuers may be negatively impacted by political events, economic conditions or inefficient, illiquid or unregulated markets in foreign countries, and they also may be subject to inadequate regulatory or accounting standards, which may increase investment risk. Small company stocks are subject to greater risk than large company stocks due to more volatility and less liquidity. This Fund is subject to interest rate risk, meaning, when interest rates rise, the value of the existing fixed income securities decreases and vice versa. Changes in interest rates have a bigger impact on long-duration holdings than on short-duration holdings. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund's prospectus for more detailed risk information.

Investment Objective: The Aggressive Allocation Fund seeks capital appreciation.

Investment Suitability: The Aggressive Allocation Fund may be suitable for investors who have a long-term investment horizon, possess a relatively high tolerance for risk and want to diversify by adding an aggressive investment option that combines U.S. and international stocks. The Fund attempts to achieve its objective, through investments primarily in the Select Funds, by combining a greater percentage of U.S. equity securities with a smaller percentage of international equity securities.

Securities of foreign issuers may be negatively impacted by political events, economic conditions or inefficient, illiquid or unregulated markets in foreign countries, and they also may be subject to inadequate regulatory or accounting standards, which may increase investment risk. Small company stocks are subject to greater risk than large company stocks due to more volatility and less liquidity. This description of risks is provided as a summary of the principal investment risks associated with this mutual fund. Refer to the Fund’s prospectus for more detailed risk information.

The Morningstar Rating™ for funds, or “star rating,” is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36–59 months of total returns, 60% five-year rating/40% three-year rating for 60–119 months of total returns and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary. Past performance is not guarantee of future results.

Asset Allocation subject to change at any time. Pie chart is a representation, and actual exposures may differ. The size denotes the relative weighting in the Fund.

*Due to rounding, portfolio holdings data may not sum to 100%.
